

# Euryalus Framing Package

---

Thank you for purchasing our framing package. I hope that it provides a great start to this ambitious and rewarding project.

Listed below is a list of the materials for your package. The list is based upon using 2" wide stock and it includes at least 25% extra stock for those occasional "OOPS" that can occur with model building. In some cases your stock may include stock that is wider than 2" or may even use 3" stock. With 3" stock there could be an adjustment on the number of sheets provided; however the total width provided will be the same or more. Also because each package is custom milled there could be additional sheets provided if there are some defects in the sheets or if our milling process just yields some extra stock.

All of the materials included are packed in plastic sleeves and labeled for your convenience. Each label contains both the full scale dimension and actual decimal equivalent in 1:48 scale. For example: **.292 (14" Full Scale)**. When I mill your stock it is our standard practice to target the thickness at about .005" oversize. That means the stock is actually about +.005" - +.008" range because I will stop slightly thicker than the target thickness. This oversize allows for final finishing and fitting. In our example above that means the actual thickness of the material is .297" - .300" in your sleeve.

The framing stock includes a notation **Framing** on the label. This wood is usually cut differently to accommodate the fact that you will be mostly viewing the frames from their edge; however, in a pinch you could interchange framing stock with the other pieces.

You should store your materials at room temperature and ideally around a 50% relative humidity. Avoiding temperature extremes is always best practice and if your package is stored for a longer period of time, just check it occasionally and perhaps rotate the sleeves of stock. Because the package contains sheet stock it is best to store it lying flat rather than on end.

## Framing Stock

Full Scale Size	Quantity of 2" Sheets	Decimal Equivalent
11"	31	.229
11.5"	4	.240
12	9	.250
13	6	.271
13.5	4	.281
14	4	.292

**Keel, Deadwood, Apron, etc.**

Full Scale Size	Quantity of 2" Sheets	Decimal Equivalent
6"	1	.125
11"	2	.229
12"	2	.250
14.5"	2	.302
15"	4	.313
18"	3	.375
22"	2	.458
3"	1	.063

Note the 3" thick piece of stock is an optional item for those builders who prefer to use it as a laminate instead of carving at the bearding line on the deadwood. Of course you will need to reduce the 22" stock to accommodate the laminate.

**Fillers – 2" Wide Sheet Version**

Fractional Size	Quantity of Sheets	Decimal Equivalent
3/32	1	.094
5/64	2	.078
1/16	1	.062
3/64	1	.047
1/32	3	.031

The above filler sheets will need to be custom thickened between frames to complete the floor.

Upon receipt of your wood package, please check to be sure that all of your components are included.

Best of luck on your build and thank you for allowing us to be a part of your build!

Jeff Hayes
